

R. Jeya Suriya (Rjs)

Personal Knowledge Base

Executive Summary

R. Jeya Suriya is an aspiring Artificial Intelligence Engineer and Filmmaker whose career is centered on solving technical problems while telling meaningful stories. His interests span Machine Learning, Deep Learning, Large Language Models, Retrieval-Augmented Generation (RAG), software engineering, and cinematic storytelling.

His professional background began in full-stack software development, where he worked on healthcare applications using Java, SQL, and OpenEMR. Over time, his focus shifted toward Artificial Intelligence, with a strong emphasis on building production-ready AI systems rather than academic prototypes.

Alongside technology, filmmaking remains an equally important pursuit. His long-term vision is to become a film director while integrating AI into creative workflows wherever meaningful.

Core Identity

I am both an engineer and a storyteller.

Rather than viewing technology and cinema as separate disciplines, I believe they complement each other. Engineering develops logical thinking and problem solving, while filmmaking develops empathy, communication, and creativity. My career is built around mastering both.

Professional Philosophy

I believe learning is most effective when theory and practice are combined. For every topic I study, I aim to understand the underlying principles, build a working implementation, learn industry best practices, and improve the project until it resembles a real-world application.

Technical Journey

Started with Java, SQL, Object-Oriented Programming, Backend Development, and Full Stack Development. Later specialized in Python, Machine Learning, Deep Learning, NLP, PyTorch, FastAPI, Retrieval-Augmented Generation (RAG), Vector Databases, Embeddings, Llama Models, and Prompt Engineering.

Learning Characteristics

First-principles thinking, structured learning (Fundamentals → Architecture → Implementation → Industry Usage → Real Project → Deployment → Optimization), and a builder mindset focused on learning through projects.

Technical Interests

Artificial Intelligence, Machine Learning, Deep Learning, Large Language Models, Retrieval-Augmented Generation, AI Agents, NLP, Backend Development, System Design, APIs, and Vector Search.

Filmmaking Philosophy

Cinema is more than entertainment. I study story structure, screenwriting, character arcs, blocking, editing rhythm, lighting, camera language, sound, and audience psychology to understand why stories resonate emotionally.

Influences

Christopher Nolan: ambitious storytelling, narrative structure, technical precision.
Mani Ratnam: emotional realism, human relationships, visual composition, grounded storytelling.

Favorite Actors
Suriya, Mohanlal

Favorite Movies
OK Kanmani, Soorarai Pottru, Inception, Hey Ram, Thalapathy, Kannathil Muthamittal.
